

Siltec, advanced Silicone Resin Technology formulated for New Zealand conditions. Siltec combines the benefits of an excellent water repellent plus breathe-ability. It's durable and easy to apply.

The many advantages of Siltec are:

- Durable and economical
- Water repellent
- Lower dirt pick up
- Water vapour permeable
- Weathering resistant
- Resists mould and algae
- High UV resistance
- Solvent free
- Mineral appearance
- High hiding power
- Easy to apply
- Abrasion resistant
- Suitable over most substrates

The Paint on the Move

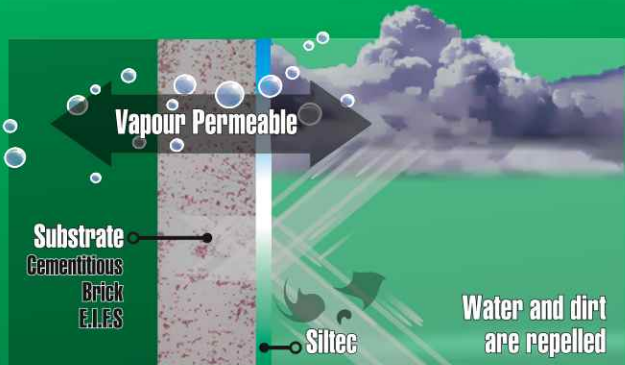

**HAVE YOU EVER
SEEN A WET DUCK?**

The "Leaky Buildings Syndrome" is all too common in many buildings in New Zealand. A significant technological break through is to use silicone chemistry to protect the exterior facade against typical problems associated with conventional acrylic paints.

CAN YOU AFFORD TO MAKE THE SAME COSTLY ERRORS?

Siltec allows the wall substrate to dry out, repels dirt, rain and is very durable.

BREATHE-ABILITY:

The external walls of buildings need to breathe, so as to dry out and maintain a stable state. Normal acrylic paints generally seal in the moisture, causing health issues to the building and its occupants. Siltec's combination of mineral and silicone technology allows water vapour to easily pass through the paint, without letting water in. For this reason Siltec is ideal on cementitious substrates, including EIFS, render, pre-cast concrete and similar.

DURABILITY:

Silicone resin paint technology has been around for 30 years, and has been evolving ever since. There are numerous examples of the product with more than 15 years exposure in large dirty European cities with out noticeable deterioration in performance or presentation. (No mould and self washing). Siltec includes this pedigree for high performance in the tough New Zealand environment.

MINERAL FINISH:

Siltec provides that "natural mineral look", seen in many European cities. This natural ambience is a reflection of a building that has class and longevity. Technically the results are fact, not fiction.

TECHNOLOGY:

Coating Technologies Ltd has formulated the Siltec range for New Zealand conditions taking into account its high UV and marine environment.

THE PERFECT FINISH:

The facade of a building is often the most visible and therefore most important aspect to create the right image. Siltec will bring not only the best in performance for the sake of the building but also its occupants. It will do this year in and year out at the lowest overall investment. Siltec goes on easily, is water based and can be expected to perform beyond anything else. Siltec the "breathing paint", for the 21st century.
